TRANSPORTATION POLICY COMMITTEE
12:30 p.m., Thursday, July 27, 2023
KIPDA Burke Room
11520 Commonwealth Drive
Louisville, Kentucky 40299

Please review the following notes:
• TPC members and the public may attend the meeting at 11520 Commonwealth Drive, Louisville KY.
• TPC members and the public may participate, observe, and comment online.
• All TPC members will be provided a unique web-link to the Zoom (video conference) in advance of the meeting should they wish to participate online.
• All TPC voting members participating online must activate their web cameras during the meeting per Kentucky Open Meetings and Open Records Statutes.
• The public may review the meeting materials and find the link to the video meeting at: https://www.kipda.org/committees-and-councils/transportation-policy-committee/meeting-information/
• There will be a public comment period at the beginning of the TPC meeting. The public may also submit comments in advance of the meeting by emailing: KIPDA.trans@kipda.org.

AGENDA

1. Call to Order, Welcome, Roll Call

2. June 2023 and July 2023 Special Meeting TPC Meeting Minutes – Review and approval (see enclosed). Action Requested

3. Public Comment Period – The TPC Chair will facilitate a review of comments submitted prior to the TPC meeting and entertain comments offered as part of Agenda Item #3.

4. Public Involvement Report – Staff will report on activities undertaken to engage the public, comments received, and future public involvement opportunities (see enclosed).

5. July TPC Special Meeting Recap – Staff will discuss the recent Special Meeting of the TPC on July 11th.

6. KYTC Funding Transfer Discussion – KYTC and KIPDA Staff will discuss recent end of fiscal year transportation funding developments in Kentucky. Action Requested

7. Amendment 3 to the Connecting Kentuckiana 2050 Metropolitan Transportation Plan & FY 2023-2026 Transportation Improvement Program – Staff will discuss the projects and changes for proposed Amendment 3 to the CK2050 MTP and FY 2023-2026 TIP. Action Requested
8. **Unified Planning Work Program Amendment** – Staff will present an amendment to the UPWP. 
   **Action Requested**

9. **SHIFT Working Group** – Staff will discuss the latest update and next steps for the KYTC SHIFT process.

10. **Budget Review Subcommittee on Transportation Hearing Update** – KIPDA staff will discuss the July 19th hearing on MPO activities in Frankfort.

11. **Amendment 4 Schedule to the Connecting Kentuckiana 2050 Metropolitan Transportation Plan and FY 2023-2026 Transportation Improvement Program** – Staff will provide a schedule for Amendment 4 to the CK2050 MTP and FY 2023-2026 TIP.

12. **Administrative Modifications to the FY 2023-2026 Transportation Improvement Program** – Staff will provide information for Administrative Modification 1 & 2 to the FY 2023-2026 TIP.

13. **MPO Director’s Report**

14. **Other Business**

15. **Adjourn**
Call to Order
Vice-Chair J. Byron Chapman called the meeting to order at 12:31 p.m. After roll call was taken, it was determined that there was a quorum present.

Review and Approval of TPC Minutes
Kevin Baity, Town of Clarksville, made a motion to approve the minutes for the May TPC meeting. Isidro Delgado, Kentucky Transportation Cabinet (KYTC), seconded the motion and it carried with a majority vote.

Public Comment Period
There were no public comments.

Public Involvement Report
Greg Burress, KIPDA staff, reported on activities undertaken to engage the public. No action was required.

Amendment 2 to the Connecting Kentuckiana 2050 Metropolitan Transportation Plan (MTP) & FY 2023-2026 Transportation Improvement Program (TIP)
Chris Nicolas, KIPDA staff, presented discussed the projects and changes for proposed Amendment 2 to the CK2050 MTP and FY 2023-2026 TIP

Nicole George, Louisville Metro Government, made a motion to approve Amendment 2 to the MTP. Bernie Bowling, City of St. Matthews, seconded the motion and it carried with a unanimous vote.

Isidro Delgado, KYTC, made a motion to approve Amendment 2 to the TIP. Bernie Bowling, City of St. Matthews, seconded the motion and it carried with a unanimous vote.

FY 2024 Planning Studies
Andy Rush, KIPDA staff, discussed the results from the recent application process for planning studies. Nicole George, Louisville Metro Government, made a motion to approve funding the two planning studies. Tubby Purcell, City of Charlestown, seconded the motion and it carried with a unanimous vote.

Indiana Dedicated Funding
Andy Rush, KIPDA staff, presented the latest status of the FY 2023 dedicated funds in Indiana. There was discussion. Nick Creevy, Floyd County, made a motion to approve flexing the FY 2023 Indiana dedicated funding to TARC. Carrie Butler, TARC, seconded the motion. Tubby Purcell (City of Charlestown), Kevin Baity (Town of Clarksville), and Claire Johnson (City of New Albany) opposed. The motion carried with a majority vote.

Urbanized Area Boundary
Chris Nicolas, KIPDA staff, presented the next steps for the adjusted Urbanized Area Boundary. No action was required.
Agenda Item #2

Administrative Modification 1 to the FY 2023-2026 Transportation Improvement Program (TIP)

Chris Nicolas, KIPDA staff, provided information on Administrative Modification 1 to the FY 2023-2026 TIP. No action was required.

MPO Director’s Report

Andy Rush, KIPDA staff, provided the following updates:

- Introduced new Transportation Planners Brady Hill and Kyle Thorne.
- Randall Embry is retiring at the end of June.
- Updated the committee of the progress of the Safe Streets for All grant.
- Encouraged TPC members to attend the KIPDA Board meeting following TPC.

Other Business

There was no other business.

Adjournment

The meeting was adjourned at 1:44 p.m.

Call to Order
Vice-Chair J. Byron Chapman called the meeting to order at 10:03 a.m. After roll call was taken, it was determined that there was a quorum present.

Public Comment Period
There were no public comments.

KYTC Federal Funding
Andy Rush, KIPDA staff, provided an update on federal funding, including cost increases and the status of the STBG-MPO (SLO) and TA programs in Kentucky. There was discussion. Carrie Butler, TARC, made a motion to approve the cost increase of $1.8 million in STBG-MPO for project 1877. Rick Tonini, City of St. Matthews, seconded the motion and it carried with a unanimous vote.

Other Business
There was no other business.

Adjournment
The meeting was adjourned at 10:43 a.m.

MEMORANDUM

TO: Transportation Policy Committee

FROM: Greg Burress

DATE: July 20, 2023

SUBJECT: Public Involvement Report

The attached report outlines public engagement activities and results from June of 2023. This month’s report contains social media analytics, website analytics, and a summary of any events attended in the month of June. Proposed Amendment 3 for the FY 2023-2026 TIP and MTP held a public comment period. A summary of strategies, numbers, and campaign totals are included in the report. Please note, data from a July campaign are included in the overall total for numbers from Amendment 3 so discrepancies exist when comparing it to the overall social media data from June.

MEMORANDUM

TO: Transportation Policy Committee (TPC)  
FROM: Andy Rush  
DATE: July 20, 2023  
SUBJECT: July TPC Special Meeting Recap

On July 11th, a Special Meeting of the Transportation Policy was held. The purpose of the meeting was twofold:

1) To seek approval of an urgent cost increase from KYTC  
2) To discuss the reasons behind the urgency which includes the risk of rescission of certain federal funding

Staff will provide a recap of the July 11th meeting and discuss recent developments with the committee.
MEMORANDUM

TO: Transportation Policy Committee (TPC)
FROM: Andy Rush
DATE: July 20, 2023
SUBJECT: KYTC Funding Transfer Discussion

At the end of each Federal Fiscal Year, KYTC typically looks to maximize the amount of federal transportation funding that comes to Kentucky through an annual Redistribution process. Through this process, state DOTs that have the ability to obligate additional funds by the end of the FY (Sept. 30th) request an increase to what is known as the state’s obligation authority. The money that gets redistributed through this process each year typically comes from state DOTs that are unable to obligate their annual amount by the end of the year.

KYTC is tentatively expecting approximately $120 Million in additional spending authority through this year’s process. They were recently alerted by USDOT that a significant amount of additional money (~$30 Million) is likely to be available through this same process as other DOTs across the country are unable to spend their money.

In order to pursue the additional approximately $30 Million in additional federal funds for Kentucky, they need to dip into other sources of federal funding apportionments. One of those federal funding streams is the SLO (STBG-MPO) funding under the KIPDA TPC’s control, which currently has a large balance, as we all know. KYTC is asking to borrow $40 Million of the unobligated SLO money that they would commit in writing to paying back dollar for dollar. They would use that money and put it directly into the I-Move project by the end of the fiscal year.

This is very similar to requests in 2012, 2017, and 2019 when KYTC requested to borrow a portion of the unobligated SLO funding. The TPC approved those transfer requests in all instances. In this case, there are two additional reasons to consider approving this one:
1. By transferring this money, approximately $30 Million in new federal funds could come to Kentucky, benefiting the state as a whole.

2. The transferred money would spend down the old money on the books in FHWA’s FMIS accounting system. As mentioned during the recent Special TPC Meeting on July 11th, there is a substantial amount of SLO money in the “old” (pre-IIJA) FMIS codes. This is the money that is at some level of risk of rescission given the federal accounting discrepancies described last week. When KYTC obligates the borrowed money, our balance of “old” SLO money in FMIS should go to zero.

KYTC needed to request the additional money from USDOT through the redistribution process by July 18th. Given the short notice, the transfer has been “conditionally” approved. The issues involved with this fund transfer will be discussed and the TPC will have the final say on the transfer. This conditional approval provided KYTC with what they needed to make the request today to the Federal government. Should the TPC choose to deny the request, there may be some other options that could be pursued.

**Action is requested.**
MEMORANDUM

TO: Transportation Policy Committee

FROM: Chris Nicolas

DATE: July 19, 2023

SUBJECT: Amendment 3 to Connecting Kentuckiana 2050 Metropolitan Transportation Plan (MTP) and the FY 2023-2026 Transportation Improvement Program (TIP)

KIPDA staff are ready to present Amendment 3 to the committee for consideration. Sponsors were given until May 3rd to submit project changes. The air quality conformity analysis and the public comment period have been completed. The public comment period was open for 15 days from June 23, 2023, to July 8, 2023, with a virtual open house from 5-6 pm on Wednesday July 5th.

Greg Burress sent public comments to the Transportation Policy Committee (TPC) members on July 12th as part of their 15-day review.

Action is requested.
Amendment 3

Connecting Kentuckiana 2050 Metropolitan Transportation Plan (MTP) & Fiscal Year 2023-2026 Transportation Improvement Program (TIP)

TPC Approval Scheduled for

July 27, 2023
**KIPDA AMENDMENT 3 SCHEDULE**

Connecting Kentuckiana 2050 Metropolitan Transportation Plan (MTP) & Fiscal Year (FY) 2023-2026 Transportation Improvement Program (TIP)

**WHY ARE THERE AMENDMENTS TO THE MTP & TIP?**

New projects that are not regionally significant and qualify as Group Projects, as well as many minor changes to existing projects, can be added through an administrative modification. Administrative modifications can be processed within 30 days.

New projects and project changes that do not fit the criteria above must be added to the MTP and/or TIP through an amendment. There are many reasons why a project must be amended. Adding a regionally significant project that does not fit KIPDA’s Group Projects policy or changing the scope of a roadway project to add a travel lane are both examples of projects that must be amended. While every effort is made to expedite amendments, the process can take up to 6 months.

**Additional Information**

The MTP & TIP amendment process is NOT an opportunity to request MPO dedicated funds. All new projects and changes to existing projects must be submitted through the Project Application form found on KIPDA’s Transportation Planning Portal.

The Portal can be accessed at the following address: https://kipdatransportation.org/forms/
The Kentuckiana Regional Planning and Development Agency (KIPDA) is the Metropolitan Planning Organization (MPO) for the five-county region covering Jefferson, Bullitt and Oldham Counties in Kentucky and Clark and Floyd Counties in Indiana. The MPO’s responsibilities include producing a long-range transportation document, known as Connecting Kentuckiana 2050 Metropolitan Transportation Plan (MTP) and a short-range planning document, the Fiscal Year (FY) 2023-2026 Transportation Improvement Program (TIP).

Changes have been proposed to the TIP and MTP. The TIP, with the proposed changes, remains fiscally constrained. This packet includes the following document:

- A listing of all projects being added, removed and/or modified
- Schedule for Amendment 3
- Air Quality conformity documentation
- Meeting minutes from the Interagency Consultation (IAC) conference call

Providing comments for the proposed changes can be submitted by any of the following methods:

- Visiting [https://kipdatransportation.org/amendment3/](https://kipdatransportation.org/amendment3/) and click on the Amendment 3 Map link
- Emailing kipda.trans@kipda.org
- Mail to the following address
- Call with your comments at 502-266-6144 ext 123, 1-800-648-6056 (KY TDD) or 1-800-962-8408 (IN TDD)

**TIP and MTP Amendment, KIPDA**

11520 Commonwealth Drive, Louisville, KY 40299

- Attend the virtual open house on July 5th from 5:00 to 6:00 pm via Zoom. Members of the public are encouraged to ask questions and leave comments. A link to the virtual public meeting can be found at: [https://kipdatransportation.org/amendment3/](https://kipdatransportation.org/amendment3/)

Please contact Community and Committee Engagement Specialist Greg Burress at 502-562-6144 ext. 123 or via email at greg.burress@kipda.org for additional questions or information.

<tr>
<td>Description:</td>
<td>This project will transform 9th Street/Roy Wilkins Avenue just west of the downtown Louisville from the Main Street to Broadway from a six-lane thoroughfare with extremely wide right-of-way into a &quot;Complete Street.&quot; Improvements to be considered during the Design process include: Reduce the number and width of lanes, convert one-way traffic to two-way (with a two-way left turn lane) on Muhammad Ali Blvd. and Chestnut St./River Park Drive, eliminate negative offset left-turn lanes, adequately dimensioned turn bays, traffic signal upgrades, expanded fiber throughout the corridor, protected/permissive left turns at signals, sidewalk expanded up to 20-feet wide, curb extensions, pedestrian refuge islands, pedestrian scale lighting, crosswalk visibility enhancements, tabled intersections, protected bike lanes, improved signage, bus shelters, kiosks with real-time bus information, dedicated bus lanes, bus bulbs, increased tree canopy, bioswales, and improved storm drainage.</td>
</tr>
<tr>
<td>Justification:</td>
<td>Eliminate the physical and psychological barrier that the &quot;9th Street divide&quot; creates between Louisville's Central Business District and the West End neighborhoods; create a safe and accessible travel experience for all users including pedestrians, cyclists and transit riders; increase economic vitality through creating a safe, attractive and comfortable environment; provide opportunities for parks and open spaces, playgrounds, recreation access, street tree canopy and storm water management features; and provide a safe and efficient corridor for vehicle and freight travel.</td>

<td>Added travel lanes project on I-64 from US 150 to Spring Street. Project also includes added lanes on I-265 from I-64 to State Street and improvements to the interchanges of I-64 at US 150 and I-265. Added travel lanes project on I-64 from US 150 to just north of Cherry Street with additional pavement rehabilitation extending to Main Street. Project also includes added lanes on I-265 from I-64 to north of State Street and improvements to the interchanges of I-64 at US 150 and I-263.</td>
</tr>
<tr>
<td>Justification:</td>
<td>The addition of the mainline through and auxiliary lanes on I-64 as well as additional ramp lanes at the US 150 and I-265 interchanges will provide improved densities, levels of service and travel times with significant reduction in driver delay west of I-265. To improve traffic congestion and accessibility</td>

Welcome/Roll Call

A total of eight state, regional, federal, and local agencies were in attendance with 14 representatives to participate in the IAC video conference call for Amendments 2 and 3 of the Connecting Kentuckiana 2050 Metropolitan Transportation Plan and the FY 2023-2026 Transportation Improvement Program. The meeting began just after 3:00 p.m.

Amendment 1 Project discussion

Before the discussion of Amendments 2 and 3, FHWA requested an update on the development of the new KIPDA MTP & TIP and Amendment 1 of the new TIP. Those are scheduled for KIPDA TPC approval at their May 25th meeting. Amendment 1 was discussed. Mr. Andy Rush provided updates to the TIP and MTP statuses. Details were provided for Amendment 1 including the public review being recently completed. Mr. Rush asked if there were any questions.

Mr. Nick Vail states a non-exempt project was included in Amendment 9 (of the current MTP & TIP), which is now in Amendment 1 and asks if analysis needs to be re-run. Mr. Vail leans to a no and Ms. Dianna Myers asks for an additional explanation of Amendment 1. It is then discussed that the Louisville Area has been changed to moderate for ozone and projects in Amendment 1 will need new analysis that includes a new 2023 model year. Without this change, the analysis for Amendment 1 would be the same analysis used previously for the MTP update. Discussion is then turned to the updates to the MTP and the TIP. It is determined that the analysis was underway prior to January 7, 2023, change so the updates to the MTP and TIP can continue. Ms. Myers says that a 2023 model is required in MOVES and that Mr. Simon will provide information to Mr. Craig Butler for a MOVES model run. Mr. Simon and Mr. Butler agree.

Amendments 2 and 3 Project discussion

KIPDA staff presents the following exempt projects for comment and there are no objections on any:

- an Oldham County trail project (KIPDA ID 2981),
- a new Louisville Metro project “Sidewalk Rehabilitation- Community Project Funding”,
- a reduction in project size for East Market Streetscape improvements (KIPDA ID 2064) in Louisville.
- Reimagine 9th Street (KIPDA ID 2733) is introduced as a non-exempt project but only due to two-way conversions and there are no objections.
• Mr. Rush also presents a funding change for a center turn lane project on Buechel Bank Road (KIPDA ID 381) in Louisville and there are no objections.
• A new project for road diets on 10 separate roadways (KIPDA ID 3160) in Louisville is presented as exempt. Mr. Vail concurs that road diets are exempt and there are no objections.
• A new electric vehicle charging infrastructure project, “National Electric Vehicle Infrastructure (NEVI)” is presented as exempt with no objections.
• An I-64 added travel lanes project (KIPDA ID 2899) in Floyd County, Indiana is presented as non-exempt due to funding change and a negligible project description and scope change. The change affects approximately 1/3 of a mile and the project is due to open in 2027. Mr. Rush asks if a new analysis is needed. Ms. King raises the concept of “de minimis.” Ms. Myers suggests new modeling is required. Mr. Butler disagrees. Ms. King discusses technical details. Mr. Rush states that KIPDA will remodel the project but that it will therefore need to be included in a full amendment to be known as Amendment 3.
• KIPDA staff continues to present a TARC project “Purchase Replacement Fixed Route Buses” as exempt and there are no objections.

Other Business
Mr. Simon presents changes to the Memorandum of Understanding between the IAC members. Ms. Myers acknowledges changes to local governments and recommends that local governments sign, but that EPA Region 4 will not sign. The meeting is adjourned at approximately 6:00 p.m.
Connecting Kentuckiana 2050 Metropolitan Transportation Plan- Amendment 3
FY 2023-2026 Transportation Improvement Program- Amendment 3
Interagency Consultation Group Conference Call Meeting Minutes
June 21, 2023
9:30 AM EDT

Participants:

EPA – Dianna Myers, Anthony Maietta, & Simone Jarvis
FHWA – Nick Vail, Tonya Higdon & Erica Tait
KYTC – Tom Hall & Isidro Delgado Herrera
LMAPCD – Michelle King & Craig Butler
KYDAQ - Lauren Hedge, Anna Bowman
KIPDA – Andy Rush, Greg Burress, Randy Simon, Jeremeih Shaw, Chris Nicolas, Brady Hill, Spencer Williams, & Kyle Thorne

Welcome/Roll Call:

A total of 20 participants, representing six local, state, regional, and federal agencies participated in the IAC Conference Call for Amendment 3 of KIPDA’s Connecting Kentuckiana 2050 Metropolitan Transportation Plan and the FY 2023-2026 Transportation Improvement Program. The meeting began shortly after 9:30 AM EDT on June 21, 2023. Mr. Andy Rush began the meeting with some introductions to new KIPDA staff.

Project Discussion:

Mr. Rush offered an overview of the updates to the 3 non-exempt projects included in Amendment 3 acknowledging the previous discussion during the May 17th, 2023, IAC meeting. The most notable update since the previous meeting is that the air-quality analysis scenarios now include the year 2023. This change occurred because the Kentucky portion of the Louisville area’s 8-Hour Ozone (2015 Standard) Classification was recently updated from “Marginal” to “Moderate”, and the additional analysis year is now required.
Mr. Rush reported that KIPDA uses 2019 as the base year and the Year 2025 for the travel model interpolation to generate the 2023 values. All scenarios fall under the respective budgets for NOX and VOCs.

He added a reminder that Amendment 3 of the Connecting Kentuckiana 2050 Metropolitan Transportation Plan and the FY 2023-2026 Transportation Improvement Program are contingent on federal approval at the time of this meeting.

Schedule Discussion:

KIPDA staff discussed key dates (shown below) of the anticipated schedule for the amendment:

Other Discussion:

Ms. Dianna Myers discussed the MOVES 4 Model availability and up and coming grace period which will be announced soon. Ms. Myers mentioned that there is likely to be a new NAAQS standard for particulate matter coming out in the fall of 2023 and discussed the Ozone Maintenance Plan comments with Ms. Michelle King.

Mr. Nick Vail confirms with KIPDA staff that the new air quality analysis with the 2023 scenario will be included in the Amendment 3 packet for public review. Additionally, he gives the group of reviewing agencies a reminder regarding the federal deadline for review of KIPDA’s new MTP and TIP by close of business today (6/21/23).
Mr. Rush informs the group that Amendment 4 will likely be needed this fall and that we should expect the next IAC Call to occur within the next few months.

The conference call adjourned at approximately 10:00 am.
AIR QUALITY CONFORMITY

At this time, the Louisville, KY-IN transportation planning study area consists of Clark and Floyd counties and 0.1 square miles of Harrison County in Indiana, and Bullitt, Jefferson, and Oldham counties and approximately 4 square miles of Shelby County in Kentucky. (However, this description of the planning area is subject to changes due to the results of the 2020 Census, which have been released recently. The effect on the Louisville, KY-IN transportation planning study area has not been determined at this time.) Much of the existing planning area coincides with the local ozone nonattainment area. In the past, a portion of the planning study area also coincided with a local fine particulate matter (PM 2.5) nonattainment area, but that standard was revoked in April, 2015. The Louisville, KY-IN maintenance area for the 1997 8-hour ozone standard consisted of Clark and Floyd counties, IN, and Bullitt, Jefferson, and Oldham counties, KY. It was designated as a basic non-attainment area in June, 2004 and redesignated as an attainment area with a maintenance status in July, 2007. The 1997 8-hour ozone standard was revoked for the local area in April, 2015, and at that time, it was not necessary for the local area to determine conformity. (However, the local area was still eligible to receive Congestion Mitigation/Air Quality funding).

In June 2018, the former Louisville, KY-IN 1997 ozone maintenance area was designated as a marginal nonattainment area for the 2015 8-hour ozone standard. Since that time, the monitoring data has indicated that the design value is sufficiently low that the local area can be redesignated as attainment of the 2015 8-hour ozone standard, and the air quality agencies with responsibility for the local area have undertaken steps to do so. The redesignation State Implementation Plan has been submitted to Regions 4 and 5 of US EPA, and the Motor Vehicle Emission Budgets (MVEBs) have been found adequate by Region 5. They are still under review by Region 4. Meanwhile, in January, the Kentucky portion of the local ozone nonattainment area was “bumped up” to a moderate ozone nonattainment area.

KIPDA is updating the metropolitan transportation plan (MTP), (now to be known as Connecting Kentuckiana 2050) and the FY 2023 – FY 2026 Transportation Improvement Program (TIP). This conformity analysis will support conformity determinations by the metropolitan planning organization and the U. S. Department of Transportation agencies for both documents. This analysis is intended to support determinations of conformity under the 2015 8-hour ozone standards.
CONFORMITY UNDER THE 2015 8-HOUR OZONE STANDARD

When an area such as the Louisville area becomes nonattainment, the area must undertake a process known as conformity. This process provides a linkage between transportation planning and air quality planning. One of the key activities of conformity is to quantify the level of emissions of the air pollutant(s) and/or precursor(s) for certain analysis years and compare those levels to the motor vehicle emission budgets (MVEBs)—if they exist. The MVEBs limit the amount of a pollutant or precursor that can be emitted. If MVEBs do not exist, the area must rely on interim tests, such as comparing the emissions to the level of emissions in a baseyear, to determine conformity. The baseyear would be set by US EPA when the standard is promulgated.

When the local area was designated as nonattainment of the 2015 8-hour ozone standard, the air quality agencies with responsibility for the local area were charged with the additional responsibility to develop a set of actions that could be taken to reduce pollutant/precursor emissions. These actions were to be included in air quality plans known as State Implementation Plans (SIPs). Since the Louisville nonattainment area is a bi-state area, these sets of actions to reduce precursor emissions were to be incorporated into both the Indiana and Kentucky SIPs. It was during this process that MVEBs were established. Subsequent to the local area being designated as a nonattainment area but before the SIPs were completed, the data from the air quality monitors in the area indicated that the 2015 8-hour ozone standard had been met. With this data in hand, the air quality agencies were each able to submit a SIP known as a redesignation request. The establishment of the MVEBs was one of the components of the redesignation request. Since the SIPs were redesignation requests for ozone, the MVEBs were established for the precursors of ozone -- volatile organic compounds and oxides of Nitrogen.

CONSULTATION FOR CONNECTING KENTUCKIANA 2050

The first step in determining conformity of Connecting Kentuckiana 2050 was to consult with the interagency consultation (IAC) group concerning matters not explicitly determined by the conformity rule. Conformity under the 2015 8-hour ozone standard has been previously determined. Therefore, many of the issues normally arising in conformity had undergone consultation previously when the local area was a nonattainment or maintenance area under the 1997 8-hour ozone standard or during the previous conformity process for Connecting Kentuckiana 2050.

Consultation for this update occurred during video conferences on May 17 and June 21, 2023. The following items were reviewed and discussed.
(a) Important dates in the schedule for the update:
May 3 -- Project applications due from sponsors
May 12 -- Project review by KIPDA staff completed
May 17 & June 21 -- IAC consultation video conferences
June 23 -- Public Involvement begins for Amendment 3 begins, (ends on July 8)
July 12 -- Action by the Transportation Technical Coordinating Committee
July 12 -- Public comments sent to Transportation Policy Committee
July 27 -- Action by the Transportation Policy Committee
July 28 -- Federal review begins;

(b) A draft list of projects—sent to the IAC with consultation notice;

(c) Horizon year of Connecting Kentuckiana 2050 Metropolitan Transportation Plan — 2050

(d) AQ Conformity Tests – see table below

<table>

(e) Analysis years – see table above

(f) Pollutants/Precursors of concern and related budgets
SIP base year (2019) emissions
i. VOCs: 13.65 tons/day or 12,383 kg/day
ii. NOx: 33.03 tons/day or 29,964 kg/day

SIP regional budget (2035) emissions
iii. VOCs: 5.51 tons/day or 4,999 kg/day
iv. NOx: 17.18 tons/day or 15,585 kg/day
(g) Upcoming Air Quality Considerations
   i. Promulgation of new NAAQS for Particulate Matter
   ii. Release of MOVES4
   iii. Development and Promulgation of new NAAQS for Ozone

Other Issues affecting the update

(1) a listing of any transportation control measures (TCMs) in SIPs, if applicable—there are none.
(2) Travel Model discussion
   i. Model was recalibrated for a 2019 Base Year
      a. New Socioeconomic Data based on new Census estimates
      b. Travel estimates based on Streetlight data
(3) Air Quality Model discussion
   i. MOVES 3.1 is now being used.

ESTABLISHED PRACTICE

In addition to the issues discussed during consultation, there were several issues which were not explicitly discussed or received little discussion during the video conference consultation, but which had impacts on the analysis. Many of these issues had been discussed during previous consultations. These issues were handled in a manner consistent with the previous established practice. The more prominent issues are discussed below.

Relationship of MTP and TIP for Conformity Purposes
The Transportation Improvement Program (TIP) is maintained as a subset of the Metropolitan Transportation Plan (MTP). Therefore, the conformity determination for the MTP will serve as the conformity determination for the TIP.

Conclusion: The IAC members are informed of this from time to time in order to clarify the conformity determination for the MTP also serves as the conformity determination for the TIP.

Vehicle Registration (Fleet Mix) Data
At various times in the past, new vehicle registration data has been provided for use in developing pollutant emissions. This vehicle registration data has been reviewed and accepted by the IAC. The data being used for the Indiana counties has been updated to 2017, and the data being used for the Kentucky counties is for 2018. These data represent the most recent information available for this issue.
Conclusion: Based on a consensus of the IAC members, vehicle registration data for 2017 for the Indiana counties and for 2018 for the Kentucky counties is now being used in developing emission estimates.

CONFORMITY OF CONNECTING KENTUCKIANA 2050

The MTP, Connecting Kentuckiana 2050, was examined to determine if it met the requirements of the conformity rule under the 2015 8-hour ozone standards. In general, the process leading to a conformity determination has two major components:

1. a regional emissions (air quality) analysis to determine that air pollutant emissions do not exceed the budgets set in the SIPs, if applicable, or the emission levels for a given base year; and
2. a monitoring of the progress in implementation of the Transportation Control Measures (TCMs) contained in the SIPs.

In the past, consultation with the state and local air quality agencies and EPA had determined that there are no approved TCMs in the SIPs of Indiana and Kentucky. Therefore, it is possible to show conformity of Connecting Kentuckiana 2050 simply by determining that the air pollutant emissions do not exceed the budgets in the SIPs or the base year emissions.

ANALYSIS PROCESS

The process of calculating the regional emissions for Connecting Kentuckiana 2050 involved three main procedures. The first procedure was a review of the projects to determine which projects needed to be included in the regional emissions analysis. The second procedure was to perform the calculations necessary to quantify certain measures of travel behavior. The third procedure was to calculate the pollutant / precursor emissions. These activities are discussed below in greater detail.

Project Review

The first procedure was to review the projects to determine which projects were exempt or non-exempt and which projects were “regionally significant.” The combination of these two considerations was the basis for determining which projects were recommended for inclusion in the regional emissions analysis. During Amendment 3 of the MTP, Connecting Kentuckiana 2050, a group of projects had been proposed for the plan. These projects were reviewed by KIPDA staff, who prepared a list of the projects with information about the projects and a staff recommendation concerning the project’s status relative to its being included in the regional emissions analysis. There is usually a straightforward explanation for why projects are included in or excluded from the analysis and why they are analyzed as
they are. Most of the projects which were excluded were exempt projects as defined in the Code of Federal Regulations in 40 CFR 93.126 and 40 CFR 93.127.

During consultation, this list was reviewed and accepted by the IAC as described under the section entitled “CONSULTATION FOR CONNECTING KENTUCKIANA 2050.” (Please see above.) The projects in Connecting Kentuckiana 2050 were analyzed as indicated on the list provided to IAC.

In the past, there were several projects which could not be analyzed using the travel model. In the past, most of these projects had been evaluated using spreadsheet methods using emission factors (rates). Since the MOVES emissions model was being used in the inventory mode, emission factors were not available for this analysis. However, experience had shown that the emission impacts for these projects were always small and positive (i.e., emission reducing). Therefore, it is reasonable to predict that the emission impacts of these projects—if they could be quantified—would decrease the emissions shown in the tables at the end of this document.

Also, there was one project affecting Bullitt County that could not be included in the travel model. Unlike the projects described in the paragraph above, this project could have the potential to increase emissions. Therefore, a special effort was made to include its impacts in the analysis of travel behavior impacts and, consequently, in the regional emissions analysis. This project is the relocated (southern) section of US 31E. This project, which had been discussed during consultation in the past, involves the relocation of a small (approximately 0.2 mile) section of US 31E from Nelson County (outside of the nonattainment area) to Bullitt County (inside the ozone nonattainment area) during the reconstruction of that road. Estimates of the VMT for this project were developed using a spreadsheet approach. The VMT estimates were the product of the estimated traffic volumes for each of the analysis years and the length of the relocated section in Bullitt County. The VMT estimates for this project were then added to other Bullitt County VMT estimates of the same functional class. Consequently, the VMT estimates from this project were included with the other Bullitt County VMT, and the emissions in Bullitt County associated with this project were included in the overall emission estimates for Bullitt County.

Calculation of Travel-Related Information

The analysis of the travel behavior impacts for the nonattainment area primarily involved using the KIPDA travel demand forecasting model to determine measures of travel such as vehicle-miles-traveled (VMT) and speed. The method for determining these measures was to input the appropriate roadway and transit information into the model and to run the model using the appropriate socioeconomic information for a given analysis year. This analysis is explained below in further detail in the sections
concerning the KIPDA travel demand forecasting model and adjustment factors for travel model output.

KIPDA Travel Demand Forecasting Model
The KIPDA travel demand forecasting model is a mathematical model which relates travel to the transportation system and basic socioeconomic information. The domain of the model is a study area which includes the Louisville (KY-IN) Metropolitan Planning Area. The Louisville (KY-IN) Metropolitan Planning Area consists of Clark and Floyd counties, and 0.1 square miles in Harrison County in Indiana, and Bullitt, Jefferson, and Oldham counties and approximately 4 square miles in Shelby County in Kentucky. This area is divided into 984 smaller units called traffic analysis zones.

As previously mentioned, the KIPDA regional travel demand forecasting model was updated and calibrated in 2022. This update established 2019 as the new base year for the model. The model update utilized the information incorporated into the travel model during previous updates. In addition, a significant amount of data from Streetlight Data, Inc. was incorporated into the updated model, particularly for trips which crossed the external boundary of the model. During the update, the model parameters were adjusted such that the model output matched—within reason—two main calibration criteria based on measured data. These criteria were: (1) the total daily VMT for all highway facilities except local roads for the region; and (2) highway traffic volumes crossing the Ohio River screenline. The result of the update was a travel model which generally replicated travel in the Louisville area for 2019. The updated travel model was used in the regional emissions analysis.

The KIPDA travel demand forecasting model uses the standard four steps of modeling: trip generation, trip distribution, mode choice, and trip assignment. In addition, it considers travel by vehicles entering, leaving, and crossing the study area. These types of trips are known as external-internal, internal-external, and external-external, respectively. The internal ends of these trips are determined by the methods described below for internal-internal travel. The external ends are determined from the volume of traffic crossing the study area boundary at any of the 46 external stations.

Trip generation is the process of determining the number of unlinked trip ends--called productions and attractions--and their spatial distribution based on socioeconomic variables such as households and employment. The trip rates used to define these relationships were derived from the travel data collection efforts described above. This information was supplemented by use of the National Cooperative Highway Research Program Report #365 and the Institute of Transportation Engineers' Trip Generation Report. The KIPDA travel demand model uses three internal-internal trip purposes. Internal-internal trips are those which have both ends inside the modeling
domain. The three purposes are home-based work, home-based other, and non-home-based. The set of trip rates is one of the calibration parameters of the model.

Trip distribution is the process of linking the trip ends thereby creating trips which traverse the area. The KIPDA travel model uses a gravity model to link all trips except the external-external ones. The gravity model is based on the principle that productions are linked to attractions as a direct function of the number of attractions of a zone and as an inverse function of the travel time between zones. This inverse function of travel time is used to generate parameters called friction factors which, in turn, direct the gravity model. In addition, information from a study which investigated the behavior of travelers crossing the Ohio River and traffic count information from years near 2019 were utilized to develop additional parameters called K-factors. The K-factors are used by the model to ensure that it is predicting the correct volume of traffic crossing the Ohio River. Friction factors and K-factors are two of the calibration parameters of the model.

Mode choice is the process used to separate the trips which use transit from those which use automobiles. It is also used to separate the auto drive-alone trips from auto shared-ride trips. In some previous KIPDA travel demand models, mode choice was based primarily on information provided by the TARC Travel Forecasting Study from some time ago. In that model, the user’s benefit or utility was calculated for each mode based on zonal socioeconomic characteristics and the cost and time of the trip using the various modes. A nested logit model was used to determine the probability of the trip being made by each of the modes. This probability was then multiplied by the number of trips between zones to determine the number of trips by each mode.

As previously stated, the conformity analysis for Connecting Kentuckiana 2050 utilizes transit information from previous travel demand models. The results of the 2004 TARC on-board survey had been used to factor the data in the previous transit files. This was deemed acceptable for several reasons. The primary reason was that the transit network envisioned by Connecting Kentuckiana 2050 is essentially the same as the existing one. In addition, the number of total trips from the two models was similar. Therefore, the use of the factored transit trip information from previous travel models did not significantly change the proportion of trips allocated to transit. Finally, the proportion of trips utilizing transit is less than 2% of the total trips. So small differences in the number of transit trips should provide a negligible effect on overall travel.

Trip assignment is the process used to determine which links of the network a given trip will use. There are several assignment schemes which may be used. Two of the more common schemes are All-or-Nothing (AON)—in which all trips between two zones follow the shortest time path—and Stochastic—in which trips between two zones may be assigned to several paths based on their relative impedances or travel times.
It is not uncommon for travel models to use several assignment schemes in sequence to converge to a better assignment. A sequence commonly used involves using several AONs with the traffic volumes reported at the end of each scheme being a weighted average of the volumes from the most recent scheme and the volumes from the previous schemes. A capacity restraint provision is used to adjust travel times between assignment schemes. This sequence is called an equilibrium assignment. The KIPDA travel model uses an equilibrium assignment which converges when the change in system-wide travel time over successive iterations is estimated to be within 0.0001 or less.

Tolls are being used as a means of providing for a portion of the cost of the Louisville Southern Indiana Ohio River Bridges project. To reflect the effect of the tolls in the KIPDA travel model, time penalties have been used in the model on the bridges where tolls are being collected. As mentioned above, the toll structure was recently changed. To reflect this in the MTP update, the time penalties used in the KIPDA travel model were likewise changed to reflect the effect of the new toll structure. The time penalties also reflect some travel effects which could not otherwise be quantified.

The output from the KIPDA travel model is in the form of a series of links with each link having certain associated data such as number of lanes, capacity, facility type, area type, functional class, and volume. This data allows for the calculation of other link information such as vehicle-miles-traveled (VMT). The VMT can be calculated as the product of the volume of traffic using a link times the distance (length) of the link.

**Adjustment Factors for Travel Model Output**
The VMT and speeds from the travel demand model were adjusted before being used in the calculation of regional emissions. The purpose of these adjustments was to reconcile the model output with travel estimates from other sources, such as the Highway Performance Monitoring System (HPMS) estimates of VMT. To perform this adjustment, factors were developed for the baseyear of the model using HPMS or other estimates and applied to model output for other years.

The development of the VMT adjustment factors involved comparing the VMT outputs of the travel demand model to the HPMS VMT estimates for 2019. Factors were developed to adjust the model output to account for variation between the model and HPMS within each of the counties. To do this, the VMT from the 2019 model run was tabulated by county and functional classification. The VMT estimates derived from the model were then compared to the HPMS VMT estimates for 2019 to develop adjustment factors to be applied to the model output for subsequent years. The 8-hour ozone analysis is based on a level of traffic and the accompanying emissions expected on a typical summer weekday. For that analysis, the adjustment factors were increased by 2.9% to reflect the higher volume of traffic that can be
expected on a typical summer weekday relative to the annual average daily traffic. The adjustment factors for VMT were developed on a functional classification basis for each county.

The development of the speed adjustment factors involved a similar process. The outputs of the travel demand model were compared to estimates of speed based on the equations of the Highway Economic Reporting System (HERS).

In general, the HERS equations were used to estimate speeds for five functional classifications of urban roadways and for five functional classifications of rural roadways. The speeds from these roadway sections were used to determine the average speed for each of the five rural and urban functional classes. The speeds used in the travel model were also averaged for each of the five rural and urban functional classes for which HERS estimates had been developed. The speed adjustment factor for each of these functional classes was calculated as the ratio of the average speed using the HERS equations to the average speed using the travel model data. In some cases, the adjustment factors for some functional classes for some counties had to be based on the combined effects of the functional classes due to the sparseness of data for one or more of the functional classes.

The procedures described above produced speed adjustment factors for all functional classes except rural and urban local roads and ramps. (Ramps are not officially a separate functional class, but the speed behavior of traffic on ramps is not expected to be like that of any other functional class. Therefore, the ramps were treated as a separate “functional class”.) There was not sufficient data to estimate speeds for the roadways of these classes. For rural and urban local roads and ramps, the speeds in the travel model were used without adjustment (i.e., the speed adjustment factor for rural and urban local roads and for ramps = 1).

Calculation of Pollutant/Precursor Emissions

The calculation of the pollutant/precursor emissions for the nonattainment area involved using the adjusted output data from the KIPDA travel demand forecasting model as input to the MOVES model. KIPDA staff provided adjusted travel model output data in the form of vehicle-miles-traveled (VMT), VMT by speed bin by MOBILE 6 facility type, VMT fractions by speed bin by county by MOBILE 6 facility type, and VMT and average speed by functional class to the staff of the Louisville Metro Air Pollution Control District (LMAPCD). LMAPCD staff utilized this data along with other necessary inputs to run the MOVES model and develop emission estimates for volatile organic compounds (VOCs) and oxides of Nitrogen (NOx). They then provided these estimates to KIPDA staff. This analysis is explained below in further detail in the section below.
MOVES Emissions Model
As previously mentioned, the Louisville region is a nonattainment area for the pollutant ozone and must therefore control the precursors of ozone, VOCs and NOx. The emission estimates for VOCs and NOx were determined using the MOVES 3.1 emissions model. The staff of the Louisville Metro Air Pollution Control District (LMAPCD) produced the emissions for all of the counties in the nonattainment area. The methodology used in calculating these emission estimates is discussed below.

There are a number of factors affecting the emission estimates developed from the MOVES model. In the past, these factors included the presence of inspection/maintenance (I/M) programs in some of the counties. During that time period, the VMT generated in Clark, Floyd, and Jefferson (KY) counties came from some vehicles subject to an I/M program and from some vehicles not subject to an I/M program. The I/M program in Clark and Floyd counties was discontinued at the end of 2006. The I/M program in Jefferson County (KY) was discontinued in 2003. Therefore, these programs are no longer a factor in estimating emissions.

One of the other factors is the fuel used by the vehicles in the various counties. The fuels which are used in Clark, Floyd, and Jefferson counties include reduced Reid vapor pressure gasoline (RVP) and reformulated gasoline (RFG). While RFG is used in some portions of Bullitt and Oldham counties, unregulated gasoline is used in the other portions of those counties as well as the areas adjacent to the nonattainment area. Vehicles from these other areas can be expected to travel in the Clark, Floyd, and Jefferson (KY) counties also. In the past, the emission factors (from the MOBILE 6 model) for Clark, Floyd, and Jefferson (KY) counties used in the air quality analysis varied by county because they represent a VMT-weighted composite based on an estimate of travel in each county by vehicles from the various portions of the region. For this analysis, the MOVES model was used in what is known as the inventory mode. Using the inventory mode, it is possible to define the fuel characteristics and the presence of an I/M program for each county, but it is not possible to represent the effect of travel in a county by vehicles from other counties. Therefore, the use of composite emission factors was not possible. Other than that, the assumptions used in the analysis were consistent with those of the appropriate air quality agency for each of the counties. For Clark and Floyd counties, the assumptions of the Indiana Department of Environmental Management (IDEM) were used. Some assumptions of LMAPCD were also used for Clark and Floyd counties. For Jefferson County (KY), the assumptions of the LMAPCD were used. These assumptions had been previously reviewed and accepted by the IAC partners.

The assumptions used in developing the emissions for Clark, Floyd, and Jefferson (KY) counties were the same as those used in developing the ozone budgets update (for VOCs and NOx) for the recent redesignation request in 2022. These assumptions included some changes which were incorporated in recent years prior to 2022. The changes which affected the VOC and NOx emissions included:
(1) improved consistency and completeness of gasoline data provided with the new MOVES model,
(2) the incorporation of newer vehicle registration data (for 2017) for Clark and Floyd counties (provided by INDOT),
(3) the development and use of newer vehicle registration data (for 2018) for Jefferson County (KY), and
(4) improvements in internal model calculations to account for emission controls, driving profiles and engine characteristics.

The emissions for Bullitt and Oldham counties were also developed by LMAPCD. As with the other counties, the assumptions for these counties were consistent with those used in the redesignation request developed in 2022. Most of the inputs to the MOVES model were defaults and/or data used that was consistent with previous SIPs or data updated for the redesignation request. As mentioned above, RFG is used in some portions (the “original” portions) of Bullitt and Oldham counties, and unregulated gasoline is used in the other portions (the “new” portions) of those counties as well as the areas adjacent to the nonattainment area. The “original” portions and “new” portions refer to whether a portion of these counties had originally designated as a nonattainment/maintenance status for the 1-hour ozone standard (used in the 1990’s) or had only been designated under the 1997 8-hour ozone standard. Neither portion of either county had an I/M program. So, it was not necessary to have I/M input information for MOVES. However, it was possible that the gasoline formulation in the different portions of these counties could be different.

It was determined—based on data provided by US EPA for the MOVES model—that the gasoline formulation for Bullitt and Oldham counties is essentially the same as that for Jefferson County with respect to the use of RFG. Since the use of the MOVES model in the inventory mode does not allow for the characteristics of different blends of gasoline within the same county, the gasoline formulations of Bullitt and Oldham counties were modeled the same as for Jefferson County.

The assumptions used for Bullitt and Oldham counties were consistent with those for the ozone budgets update for the recent redesignation request in 2022. The changes which affected the VOC and NOx emissions included:
(1) improved consistency and completeness of gasoline data provided with the new MOVES model,
(2) the characterization of gasolines described in the previous paragraph,
(3) new 2018 vehicle registration data for Bullitt and Oldham counties, and
(4) improvements in internal model calculations to account for emission controls, driving profiles and engine characteristics.

LMAPCD developed emission estimates of VOCs and NOx using the MOVES model. To review, the following steps were undertaken.
(1) LMAPCD staff received (from KIPDA staff) the adjusted travel model output in the form of VMT, VMT by speed bin, and VMT fractions by speed bin, all by county and by MOBILE facility type by analysis year.
(2) LMAPCD reformatted the data from KIPDA to prepare it as input to the MOVES model. Other necessary data was also prepared.
(3) The MOVES model was run in inventory mode to determine emission estimates of each precursor for each county for each analysis year.
(4) LMAPCD staff provided the emission estimates to KIPDA staff.

RESULTS OF THE ANALYSIS

The transportation plan, Connecting Kentuckiana 2050, has been examined to determine if it is in conformity with the SIPs of Indiana and Kentucky and fulfills the criteria in the federal conformity rule (found in 40 CFR 93). The examination has been based on an air quality analysis to determine that air pollutant emissions of the appropriate areas did not exceed the VOC and NOx motor vehicle emission budgets.

As previously mentioned, the other criterion for determining conformity would have been the progress in implementation of the Transportation Control Measures (TCMs) contained in the SIPs. However, since previous consultation had determined that there were no approved TCMs, that criterion did not affect the determination of conformity. The results of the regional emissions analyses for ozone precursors are discussed below.

8-hour Ozone Analysis

The eight-hour ozone redesignation SIPs of Indiana and Kentucky contain emission budgets for the precursors of ozone, volatile organic compounds (VOCs) and oxides of Nitrogen (NOx). The regional emissions analysis was conducted to provide estimates of the levels of emissions of VOCs and NOx for the various analysis years. These emission levels were then compared to the budgets in the SIPs to determine if the conformity tests were passed.

The results of the regional emissions analysis are summarized in Tables 1 and 2. Table 1 shows the summer weekday vehicle-miles-traveled from the analysis. Table 2 shows that for 2023, 2025, and 2030, the summer weekday VOC and NOx emission levels for the 2015 8-hour nonattainment area are less than the 2019 base year emissions in the 2015 8-hour ozone redesignation SIP. Table 2 also shows that for 2035, 2040, and 2050, the summer weekday VOC and NOx emission levels for the 2015 8-hour nonattainment area are less than the emission budgets established in the 2015 8-hour ozone redesignation SIP.
Conclusions – 8-hour Ozone
The regional emissions analysis of Connecting Kentuckiana 2050 indicates that the Metropolitan Transportation Plan is consistent with the goals and emission budgets established in the State Implementation Plans of Indiana and Kentucky. The cumulative effect of the results shown in Table 2 indicates that Connecting Kentuckiana 2050 has met the requirements of conformity under the 2015 8-hour ozone standards. In summary, it can be concluded that Connecting Kentuckiana 2050 conforms to the SIPs and meets the requirements of the federal conformity rule.

NOTE: The criteria for conformity are as follows:

2023, 2025, and 2030 Regional emission levels for VOCs must be below the redesignation SIP base year emissions of 13.65 tons/day or 12,383 kg/day.

2023, 2025, and 2030 Regional emission levels for NOx must be below the redesignation SIP base year emissions of 33.03 tons/day or 29,964 kg/day.

2035, 2040, and 2050 Regional emission levels for VOCs must be below the redesignation SIP emission budget of 5.51 tons/day or 4,999 kg/day.

2035, 2040, and 2050 Regional emission levels for NOx must be below the redesignation SIP emission budget of 17.18 tons/day or 15,585 kg/day.

FROM: Andy Rush  
DATE: July 20, 2023  
SUBJECT: Unified Planning Work Program (UPWP) Amendment

The FY 2024 KIPDA Unified Planning Work Program (UPWP) is in need of amendment. KIPDA Staff have made the following changes:

1) FTA has requested that TARC ensure that two transit planning efforts are included in KIPDA’s UPWP. This includes the Route Restoration Award and the Areas of Persistent Poverty grants.
2) The planning studies utilizing PL/5303 funds in KY 2024 are now included in the UPWP by name. These include the Louisville Metro Bike Implementation Plan and the Jeffersontown Gaslight Square Study. The funding was previously included in the approved UPWP but was listed more generically prior to those studies being funded in the past couple months.
3) Updated the cost of KIPDA’s StreetLight subscription
4) Edited the INDOT-specific funding table in Appendix A

The amended FY 2024 UPWP can be found at the following link:

Action is requested.
MEMORANDUM

TO: Transportation Policy Committee (TPC)

FROM: Andy Rush

DATE: July 20, 2023

SUBJECT: KYTC SHIFT Working Group

The 2024 KYTC SHIFT (Strategic Highway Investment Formula for Tomorrow) Process is now entering the Boost Phase. This is the second phase of the process where MPOs and ADDs are asked to contribute by boosting the scores of several projects based on local preferences.

At the July 12th KIPDA TTCC meeting, a TTCC Working Group was established. The TTCC Working Group will be made up of Kentucky TTCC Members much like the group that met in the spring to develop the list of project sponsorships for SHIFT. As was the case in prior iterations of SHIFT, this TTCC Working Group will develop the group of projects to be boosted. The Working Group will meet on August 9th at 1:00 PM. This is the standard TTCC meeting date and time and will replace the standard August TTCC Meeting.

The list of projects proposed by the TTCC Working Group to be boosted will be presented to the TPC for approval on August 24th.
MEMORANDUM

TO: Transportation Policy Committee (TPC)
FROM: Andy Rush
DATE: July 20, 2023
SUBJECT: Budget Subcommittee on Transportation Hearing Update

KIPDA Staff were invited to present to the Budget Review Subcommittee on Transportation of the Interim Joint Committee on Appropriations and Revenue on July 19th. KIPDA Staff partnered with our counterparts from the Cincinnati and Lexington MPOs to discuss with the committee how MPOs operate in Kentucky.

Staff will share with the TPC a recap of the hearing.
MEMORANDUM

TO: Transportation Policy Committee (TPC)  
FROM: Chris Nicolas  
DATE: July 19, 2023  
SUBJECT: Upcoming Amendment 4 Schedule

At this time, at least one exempt project will need to be updated in the FY2023-2026 Transportation Improvement Program (TIP) and Connecting Kentuckiana 2050 Metropolitan Transportation Plan (MTP) through an amendment. KIPDA staff have notified sponsors to submit any additional changes to be included in Amendment 4 by August 24, 2023.

TPC approval is expected to be sought in October. Staff will engage the TPC in a discussion on the schedule for the amendment along with some recent developments in this process.
MEMORANDUM

TO: Transportation Policy Committee
FROM: Chris Nicolas
DATE: July 19, 2023
SUBJECT: Administrative Modification 1 & 2 to the FY2023-2026 Transportation Improvement Program (TIP)

KIPDA staff will present the key project updates included in Administrative Modifications 1 & 2 to the FY2023-2026 Transportation Improvement Program.

Qualifying criteria for administrative modifications include the following actions:

- Correcting minor data entry errors.
- Splitting or combining projects without modifying the original project intent.
- Changing or clarifying elements of a project description (with no change in funding). This change would not alter the original project intent.
- Moving a project from one funding category to another.
- Shifting the schedule of a project or phase within the years covered by the STIP/TIP (with no impact to fiscal constraint).
- Adding Planning, Design, ROW or Utilities phases to a construction project that is already included in the STIP.
- Updating project cost estimates (within the original project scope and intent) that do not impact fiscal constraint.
- Adding projects that are considered “grouped projects” that do not require public review, redemonstration of fiscal constraint, or a conformity determination.

The changes to the FY 2023-2026 TIP are being presented to you for your information only. These changes do not affect the fiscal constraint of the Transportation Improvement Program, nor will they affect the progress of other projects in the program.
